

# Presentation of Diana Bacchin, a PhD student from University of Pisa

Contact details: d.bacchin@hotmail.com

## Brief presentation:

I am a thoracic surgeon and PhD candidate committed to advancing perioperative care through evidence-based innovation. My doctoral project, "Effectiveness and Feasibility of the Enhanced Recovery After Surgery (ERAS) Protocol in Thoracic Surgery: a Comparative Analysis Across Two Centers", explores how ERAS pathways can be effectively implemented across institutions with varying structures and resources. By combining clinical data analysis with outcome-based evaluation, this research aims to identify key determinants of ERAS success and develop adaptable strategies to optimize recovery and efficiency. Ultimately, my goal is to translate research findings into practical models that enhance surgical outcomes, reduce healthcare disparities, and support a more sustainable and patient-centered healthcare system.
