

Presentation of Rebecca Sparavelli, a PhD student from University of Pisa

Contact details: sparavellirebecca95@gmail.com

Brief presentation:

I obtained my Bachelor's degree in Biological Sciences, conducting my thesis in Neurophysiology. I then earned a Master's degree in Biology Applied to Biomedicine, focusing on molecular parasitology and deepening molecular methods for malaria diagnosis and treatment. I am currently pursuing a PhD in Clinical Physiopathology at the University of Pisa, where my research investigates the molecular mechanisms underlying carcinogenesis, with a particular emphasis on lung and thyroid cancers. My research project is based on the study of immune system in tumor microenvironment of papillary thyroid cancer.
